# Province of Ontario 2023 Water Conservation and Efficiency Program Assessment

#### 1. Lead agency and contact person:

Jennifer Keyes, Director Resources Planning and Development Policy Branch Ontario Ministry of Natural Resources and Forestry

## 2. Status of goals and objectives

In 2012 Ontario adopted water conservation and efficiency goals and objectives that are consistent with the Basin-wide goals and objectives. The goals and objectives were developed based on stakeholder consultation, Indigenous engagement, and public comments received.

Ontario adopted the water conservation and efficiency goals as set out in the Great Lakes-St. Lawrence River Basin Sustainable Water Resources Agreement (herein referred to as 'the Agreement'), and developed objectives consistent with the regional objectives adopted for the Basin that are tailored for Ontario to reflect the direction in the *Water Opportunities and Water Conservation Act*, 2010, and to address stakeholder and Indigenous community requests to emphasize the importance of taking ecological water needs into account in decision making, in keeping with the broader ecosystem protection and restoration goals of the Agreement.

Ontario's water conservation goals and objectives are available at: <a href="https://www.ontario.ca/page/ontarios-water-conservation-and-efficiency-goals-objectives-and-programs-accordance-great-lakes-st">https://www.ontario.ca/page/ontarios-water-conservation-and-efficiency-goals-objectives-and-programs-accordance-great-lakes-st</a>

#### 3. Water conservation and efficiency program overview

Ontario's water conservation and efficiency program consists of a wide variety of statutes, programs and policies administered across several Ontario ministries, as well as local governments and other organizations.

The foundation of the program is the *Ontario Water Resources Act* (OWRA) and the *Water Taking and Transfer Regulation* (Ontario Regulation 387/04). The purpose of the OWRA is to provide for the conservation, protection and management of Ontario's waters and for their efficient and sustainable use, in order to promote Ontario's long-term environmental, social and economic well-being. Under the OWRA, a permit is required to withdraw more than 50,000 litres per day of ground or surface water, with a few exceptions.

Section 34.1 (9)(h) of the OWRA provides a permitting Director with authority to set terms and conditions on a permit governing the use and conservation of water taken under the permit, including requiring the holder to implement specified measures to promote the efficient use of the water or reduce the loss of water through consumptive use, conduct a water audit, and to prepare and implement a water conservation plan.

The Water Taking and Transfer Regulation outlines matters that the Director must consider when reviewing an application for a Permit to Take Water. Section 4(2).3.i. of the Regulation requires that the Director consider issues relating to the use of water, including

whether water conservation measures are being implemented or are proposed to be implemented in the use of water, in accordance with best water management standards and practices for the relevant sector, if these are available.

Provincial land use planning statutes such as the *Planning Act*, policies such as the *Provincial Policy Statement*, 2020 and plans such as the A Place to Grow: Growth Plan for the Greater Golden Horseshoe set out policy direction relating to water conservation in new developments. Section 3 of the *Planning Act* requires land use decisions to be consistent with the *Provincial Policy Statement* policies and to conform to provincial plans. The *Clean Water Act*, 2006 requires that any significant threats to municipal drinking water sources from a water quantity perspective, be identified through the preparation of water budgets and addressed in local source protection plans, such as through policies on water conservation.

The Water Opportunities and Water Conservation Act, 2010 builds upon Ontario's expertise in clean water technology and sets out a framework to make the province a continental leader in water innovation to help address global water challenges. Among other things, the Act sets the framework to encourage Ontarians to use water more efficiently by creating and implementing innovative approaches to protecting and conserving water resources for current and future generations.

## 4. Consistency with Regional Objectives

Ontario's program is consistent with the regional objectives in the promotion of environmentally sound and economically feasible water conservation measures.

REGIONAL OBJECTIVE	LEGISLATIVE AND PROGRAM SUMMARIES				
Guide programs toward long-term sustainable water use and management.	Ontario implements a range of adaptive programs and conservation and efficiency strategies that consider long-term sustainable water use, while taking into account the importance of water to related ecosystems. Implementation occurs through the issuance of water taking permits under the Ontario Water Resources Act and the preparation of source protection plans under the Clean Water Act, 2006 to protect existing and future drinking water sources by identifying at risk systems and developing policies to direct implementing bodies to take actions that address water quantity risks, and actions to protect the Great Lakes.  Under Ontario's Conservation Authorities Act, conservation authorities support and contribute to Ontario's water conservation and efficiency goals through programs and services related to natural hazard management, conservation and management of lands owned by conservation authorities, playing a key role in the source protection program and through their legislative responsibilities as 'source protection authorities' under the Clean Water Act.				

	REGIONAL OBJECTIVE	LEGISLATIVE AND PROGRAM SUMMARIES					
2)	Adopt and implement supply and demand management to	Ontario has a range of programs that manage water supply and demand to achieve efficient use and conservation of water resources, such as establishing water efficiency standards in Ontario's Building Code (O. Reg 332/12) and <i>Electricity Act</i> .					
	promote efficient use and conservation of water resources.	Under the <i>Planning Act</i> , the Ontario Government issues policy statements that local planning authorities and other land use decision-makers must be consistent with as they make land use decisions. Ontario's <i>Provincial Policy Statement</i> , 2020 requires local planning authorities to protect, improve or restore the quality and quantity of water by, among other things, "planning for efficient and sustainable use of water resources, through practices for water conservation and sustaining water quality". Provincial plans also require water conservation plans and promote green infrastructure in municipal stormwater management by municipalities.					
		Under the <i>Municipal Act</i> , 2001 and <i>City of Toronto Act</i> , 2006 (Ontario Regulations 599/06 and 609/06 respectively) municipalities may establish municipal or city service corporations to deliver water and wastewater services, subject to certain limitations and requirements. It is up to municipalities to decide whether or not a corporation would be appropriate as the most efficient means of delivering water and wastewater services. Municipal water and wastewater corporations currently cannot have private ownership. Legislative requirements for a municipality, in terms of water delivery, generally apply to its municipally established water and wastewater corporation as well.					
3)	Improve monitoring and standardize data reporting among State and Provincial water conservation and efficiency programs.	Water takers who have a permit under the <i>Ontario Water Resources Act</i> are required to monitor their daily water takings and report their data annually to the Ministry of the Environment, Conservation and Parks. In addition, a range of Ontario programs and initiatives support improved monitoring and standardized data reporting related to water supply, water use and conservation/efficiency. This includes Ontario Surface Water Monitoring and Low Water Response, the Provincial Groundwater Monitoring Network, management of Ontario's foundation geospatial datasets and analysis to support decisions about water resources, and the Ontario Geological Survey's Groundwater Initiative.					
		Ontario Regulation 506/18: Reporting of Energy Consumption and Water Use (EWRB), made under the <i>Electricity Act</i> , 1998, requires owners of prescribed properties that are 50,000 square feet or larger to report their buildings' annual energy and water					

	REGIONAL OBJECTIVE	LEGISLATIVE AND PROGRAM SUMMARIES					
		use to the Ministry of Energy by July 1 of each year. In addition, the Ministry of Energy collects data on Greenhouse Gas emissions associated with these buildings.					
		The EWRB initiative helps building owners and operators access accurate and reliable information about building performance, save money by tracking usage, identify energy and water efficiency opportunities, and compare energy and water usage to similar buildings.					
		Under this Regulation, exemptions to reporting are established for eligible reporters who meet specific exemption criteria. Exemptions are available for a single calendar year, or ongoing year-over-year.					
		https://www.ontario.ca/laws/regulation/180506					
		https://www.ontario.ca/page/report-energy-water-use-large-buildings					
4)	Develop science, technology and research.	Ontario has a number of agencies, organizations, programs and strategies that promote and cultivate science, technology and research to implement the best in water, wastewater and stormwater technology, and support innovation and adoption of water conservation approaches. These include the Ontario Clean Water Agency, the Walkerton Clean Water Centre, the Investment Accelerator Fund, the Ontario Agri-Food Innovation Alliance and the Ontario Agri-Food Research Initiative.					
5)	Develop education programs and information sharing for all water users.	Ontario is implementing a range of education initiatives and programs that raise awareness of the importance of water conservation, efficiency and cost-saving approaches to promote the sharing of information on best management practices. These initiatives and programs include: the Walkerton Clean Water Centre's curriculum and resources, which fosters leading-edge drinking water technologies and delivers education, information and advice to drinking water operators across Ontario on issues including water conservation; water efficiency labelling through partnership with the U.S. Environmental Protection Agency Water Sense Program; and support for environmental planning programs for water conservation and efficiency in the agricultural sector.					
Other programs:		In accordance with Ontario's water conservation and efficiency goals and objectives, the provinces water conservation and efficiency program includes a range of environmental and resource management legislation, strategies and programs that align with the objectives by integrating water conservation and efficient water use with other environmental management practices and considerations, such as energy use, climate					

REGIONAL OBJECTIVE	LEGISLATIVE AND PROGRAM SUMMARIES					
	change, and the protection and restoration of hydrological and ecological integrity. This includes the <i>Great Lakes Protection Act</i> , 2015, Ontario's Great Lakes Strategy, Ontario Parks Water Conservation Initiatives, the 2021 Canada-Ontario Agreement (COA) on Great Lakes Water Quality and Ecosystem Health, the Great Lakes Local Action Fund, as well as various fisheries, biodiversity, habitat, nutrients and wetlands related initiatives.					
	2023 Update - Canada-Ontario Agreement on Great Lakes Water Quality and Ecosystem Health					
	COA is the principal mechanism through which Ontario and Canada coordinate work to address their respective and shared commitments to restore, protect and conserve the Great Lakes. In 2021, Ontario and Canada signed the ninth COA, effective from June 1, 2021 until May 31, 2026. This agreement marks 50 years of collaborative Great Lakes work between both governments since the first COA was signed in 1971.					
	COA continues to build on Great Lakes restoration progress. Commitments in the 2021 agreement will advance new and ongoing actions to address a number of key areas, such as preventing toxic and nuisance algae, improving wastewater and stormwater management, reducing plastic pollution and excess road salt, restoring native species and habitats, and increasing resilience to climate change.					
	The 2021 COA includes a renewed commitment to completing environmental clean-up actions with an emphasis on six historically degraded areas, conserving key habitats around the Great Lakes and continuing to restore Lake Erie. It also includes a focus on protecting Lake Ontario, supporting nature-based recreation opportunities, and strengthening First Nation and Métis engagement in the implementation of COA.					
	The 2021 COA incorporates feedback received from engagement with the public, First Nations, Métis and the broader Great Lakes community.

REGIONAL OBJECTIVE	LEGISLATIVE AND PROGRAM SUMMARIES				
	2023 Update – Ontario's Great Lakes Strategy				
	The <i>Great Lakes Protection Act</i> , 2015 (GLPA) strengthens the province's ability to restore and protect the Great Lakes and St. Lawrence River, as well as the waterways that flow into them. Ontario's Great Lakes Strategy was first released in 2012. The GLPA requires Ontario to report on progress made under Ontario's Great Lakes Strategy every three years. The first progress report was released in 2016 and in 2022 the ministry released the second progress report. Ontario is also required to undertake a review of its Great Lakes Strategy every six years. A review of the Great Lakes Strategy is currently underway.				
	In preparing an updated Great Lakes Strategy, Ontario plans to engage the Great Lakes community to gather input on priorities to further the environmental, social, and economic health and well-being of the Great Lakes basin for present and future generations.

	2023 Update – Great Lakes Local Action Fund In September 2020, Ontario launched the first funding round of the Great Lakes Local Action Fund (Fund) transfer payment program. The Fund provided up to \$50,000 for innovative projects led by community-based organizations, small businesses, municipalities, conservation authorities, and Indigenous communities to protect and restore coastal shoreline and nearshore areas of the Great Lakes and their connecting rivers and streams. In the first round, Ontario selected 44 community-based projects to receive \$1.9 million in funding.				
	In February 2022, Ontario launched the second round of the Fund, which is providing \$1.8 million to 36 recipients, with up to \$100,000 per project that helps to protect and improve the health of the Great Lakes and benefit local communities.				
	Projects that contribute to Great Lakes protection and restoration support improved water quality and ecosystem health, which could also help to achieve water conservation and efficiency goals.
